

# SHADIYA SHIRIN V

Kerala, India | +91 7558997681 | vshadiyashirin2003@gmail.com | [GitHub](#) | [LinkedIn](#)

## OBJECTIVE

Computer Science undergraduate (graduating May 2026) with hands-on experience in Django and strong foundations in algorithms, operating systems, and database management. Seeking a role to contribute to scalable software solutions while enhancing system performance and reliability.

## EDUCATION

**Bachelor of Technology in Computer Science**

Aug 2022 – May 2026

KTU, Kerala, India | CGPA: 8.21, NO Backlogs

## TECHNICAL SKILLS

|            |                                                      |
|------------|------------------------------------------------------|
| Languages  | Python, C                                            |
| Frameworks | Django, Django REST Framework (DRF), Django Channels |
| Real-time  | WebSockets, WebRTC                                   |
| Databases  | PostgreSQL, MySQL                                    |
| Tools      | Git, GitHub, VS Code                                 |
| Concepts   | OOP, DSA, OS, DBMS, Networking, API Integration      |

## PROJECTS

**SmartLab Management System** | Python · Django Channels · Redis · WebRTC · PyQt6 2026

*Multi-client, real-time distributed academic lab platform — Django REST + ASGI backend serving two desktop clients over simultaneous HTTP and persistent WebSocket connections.*

- Architected distributed multi-tier system with Django Channels (ASGI); built real-time event pipelines using Redis as the channel layer for live broadcast of session events across concurrent WebSocket connections.
- Implemented JWT-based auth (Simple JWT) with RBAC for faculty and student roles on a shared User model with clean permission boundaries.
- Engineered WebRTC live screen monitoring via SDP offer/answer negotiation over WebSocket signalling, integrating aiortc, OpenCV, and mss.
- Modelled 15+ relational entities with FK constraints and bulk-create optimisations; delivered server-side PDF report generation via ReportLab.
- [GitHub Repository](#)

**ReparoHub** | Django · PostgreSQL · HTML/CSS 2024

*Full-stack web platform for repair-request lifecycle management with role-based access, OTP authentication, and CRUD REST APIs.*

- Built OTP-based signup and JWT session auth for two distinct user roles (customers & service centres) with clean RBAC permission boundaries.
- Designed RESTful CRUD APIs for user profiles and repair-request lifecycle with consistent request/response contracts and multi-layer input validation.
- Applied Django MVT architecture with clean separation of models, views, and templates for maintainability and easy onboarding.

## ACHIEVEMENTS & CERTIFICATIONS

- 🏆 Finalist & Best Project — Tink-Her-Hack 3.0 (Kerala's Largest Women Hackathon)
- 🎓 Foundations of Cyber Security — Google Certification
- 🏆 Certificate of Recognition — College of Engineering Thalassery & INNOVUS CS Association (Sep 2025) | Mentoring students
